the 1990s, the number of people with a mental health problem has increased in the UK. The prevalence of mental health problems in the UK is estimated to be 16.5% (Mental Health Foundation, 2007).

There is a growing awareness of the need to improve the lives of people with mental health problems. The UK Government has set out a strategy for mental health care (Department of Health, 2005). The strategy aims to improve the lives of people with mental health problems by providing them with the best possible care and support. The strategy also aims to reduce the stigma and discrimination that people with mental health problems often experience.

One of the key areas of the strategy is the need to improve the lives of people with mental health problems in the community. This includes providing them with the best possible care and support, and helping them to live their lives to the full.

One of the ways in which this can be achieved is by providing people with mental health problems with the opportunity to participate in decision-making about their care and support. This is known as 'shared decision-making'.

Shared decision-making is a process in which the patient and the healthcare professional work together to make a decision about the patient's care and support. The patient's views and preferences are taken into account, and the healthcare professional provides the patient with the information they need to make a decision.

Shared decision-making is a key principle of the strategy for mental health care. It is one of the ways in which the strategy aims to improve the lives of people with mental health problems in the community.

There are a number of reasons why shared decision-making is important. First, it helps to ensure that the patient's views and preferences are taken into account. This is important because people with mental health problems often experience stigma and discrimination, and they may not always be able to express their views and preferences.

Second, shared decision-making helps to ensure that the patient is given the information they need to make a decision. This is important because people with mental health problems often do not have the information they need to make a decision.

Third, shared decision-making helps to ensure that the patient is involved in their care and support. This is important because people with mental health problems often feel that they are not involved in their care and support.

Shared decision-making is a key principle of the strategy for mental health care. It is one of the ways in which the strategy aims to improve the lives of people with mental health problems in the community.

There are a number of ways in which shared decision-making can be implemented. One way is to provide people with mental health problems with the opportunity to participate in decision-making about their care and support.

Another way is to provide people with mental health problems with the information they need to make a decision. This can be done by providing them with written information, or by providing them with verbal information.

Shared decision-making is a key principle of the strategy for mental health care. It is one of the ways in which the strategy aims to improve the lives of people with mental health problems in the community.

There are a number of reasons why shared decision-making is important. First, it helps to ensure that the patient's views and preferences are taken into account. This is important because people with mental health problems often experience stigma and discrimination, and they may not always be able to express their views and preferences.

Second, shared decision-making helps to ensure that the patient is given the information they need to make a decision. This is important because people with mental health problems often do not have the information they need to make a decision.

Third, shared decision-making helps to ensure that the patient is involved in their care and support. This is important because people with mental health problems often feel that they are not involved in their care and support.

the \mathbb{R}^n is a linear space over \mathbb{R} with the usual addition and scalar multiplication. The inner product is defined by

$$\langle x, y \rangle = x_1 y_1 + x_2 y_2 + \dots + x_n y_n \quad (1)$$

where $x = (x_1, x_2, \dots, x_n)$ and $y = (y_1, y_2, \dots, y_n)$ are vectors in \mathbb{R}^n .

The norm of a vector x is defined by

$$\|x\| = \sqrt{\langle x, x \rangle} = \sqrt{x_1^2 + x_2^2 + \dots + x_n^2} \quad (2)$$

The distance between two vectors x and y is defined by

$$d(x, y) = \|x - y\| = \sqrt{(x_1 - y_1)^2 + (x_2 - y_2)^2 + \dots + (x_n - y_n)^2} \quad (3)$$

The distance between two points x and y in \mathbb{R}^n is defined by

$$d(x, y) = \sqrt{(x_1 - y_1)^2 + (x_2 - y_2)^2 + \dots + (x_n - y_n)^2} \quad (4)$$

The distance between two points x and y in \mathbb{R}^n is defined by

$$d(x, y) = \sqrt{(x_1 - y_1)^2 + (x_2 - y_2)^2 + \dots + (x_n - y_n)^2} \quad (5)$$

The distance between two points x and y in \mathbb{R}^n is defined by

$$d(x, y) = \sqrt{(x_1 - y_1)^2 + (x_2 - y_2)^2 + \dots + (x_n - y_n)^2} \quad (6)$$

The distance between two points x and y in \mathbb{R}^n is defined by

$$d(x, y) = \sqrt{(x_1 - y_1)^2 + (x_2 - y_2)^2 + \dots + (x_n - y_n)^2} \quad (7)$$

The distance between two points x and y in \mathbb{R}^n is defined by

$$d(x, y) = \sqrt{(x_1 - y_1)^2 + (x_2 - y_2)^2 + \dots + (x_n - y_n)^2} \quad (8)$$

The distance between two points x and y in \mathbb{R}^n is defined by

$$d(x, y) = \sqrt{(x_1 - y_1)^2 + (x_2 - y_2)^2 + \dots + (x_n - y_n)^2} \quad (9)$$
